What is Marp?

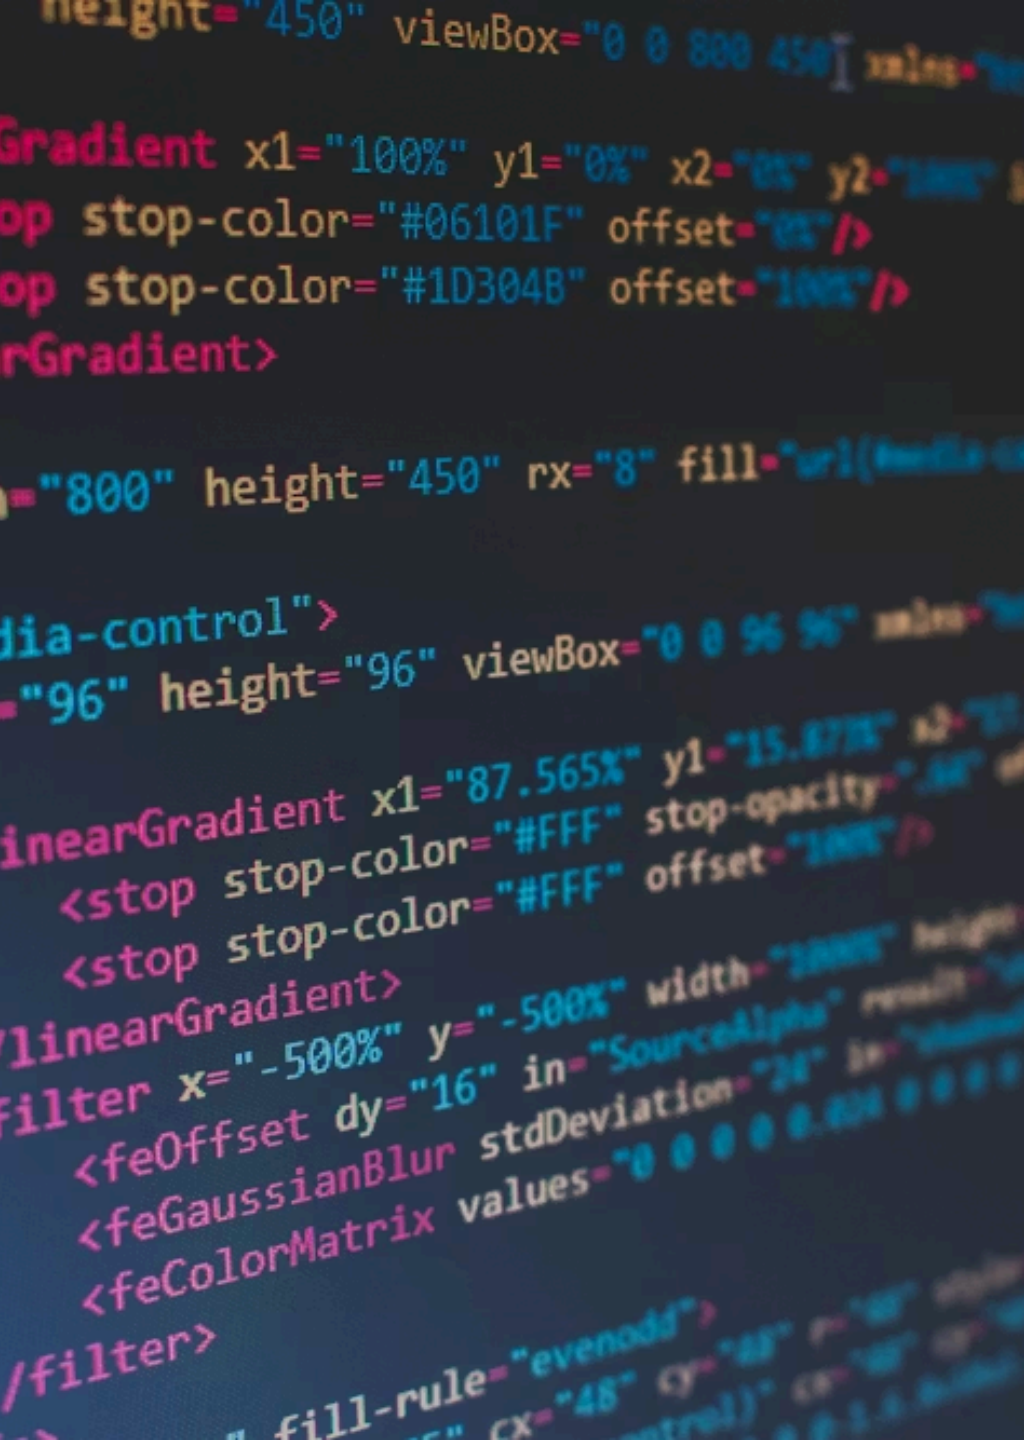
Markdown Presentation Ecosystem

Elegant slides from simple text.

Core Concept

Content-First Authoring

- **Simplification**: Focus on content, not formatting.
- **Marpit Framework**: The engine that powers the transformation.
- **Standards-Based**: Uses standard CommonMark syntax.
- **Extensible**: Customizable via CSS and plugins.



The Transformation

From Text to Pixels

- **Input**: Your `.md` file.
- **Logic**: Slide breaks identified by `---`.
- **Styling**: Directives & CSS themes applied.
- **Output**: Semantic HTML structure.

Detailed Process

Under the Hood

1. **Parsing**: Identifies slide boundaries and metadata.
2. **Directive Injection**: Applies global/local settings (theme, paginate).
3. **CSS Scoping**: Themes are automatically scoped to each `<section>`.
4. **SVG Container**: (Optional) Wraps slides in SVG for perfect scaling.

Generating Output

Flexible Deployment

> *The generated HTML is a fully functional web page, serving as the foundation for all exports.*

- **Marp CLI**: The command-line power tool for automation.
- **Interactive Preview**: Real-time feedback during authoring.
- **Self-Contained**: Assets can be bundled into a single file.

Versatile Export Formats

One Source, Many Outputs

- **PDF**: High-quality document sharing.
- **PPTX**: Microsoft PowerPoint compatibility.
- **HTML**: Interactive web presentations.
- **Images**: PNG/JPEG for social sharing or documentation.

Authoring Experience

Marp for VS Code

- **Live Preview**: Side-by-side editing and viewing.
- **Export UI**: Export to PDF/PPTX with a single click.
- **Snippet Support**: Quick insertion of directives and layouts.
- **Theme Detection**: Automatically recognizes local CSS files.
